

Mixed-curvature surface: diagonal-Gaussian W2 equals the true 3D distance exactly

local-query RMS=0.001%, aligned RMSE=0.0000

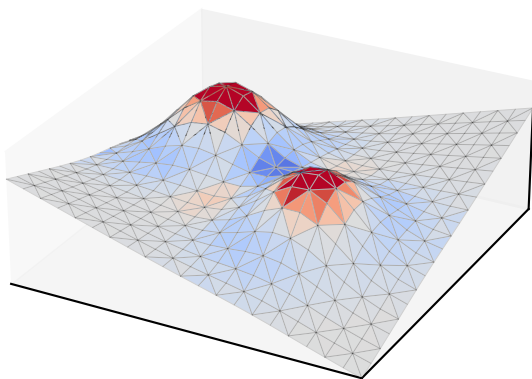

INPUT: flat latent coordinates (u, v)

color = target angle-defect curvature from W2 edge lengths

TRUTH (evaluation only): two-bump + saddle graph

OUTPUT: height-field 3D fitted to local W2
color = reconstructed angle-defect curvature

OVERLAY: truth = gray, output = red
rigid alignment is used only for evaluation
