

MNIST digit-3-centered region: unregularized discrete W2 on 14x14 pixel masses

observed = 924 edges; smooth selection: q05(normal dot) >= 0.25 and face s_min >= 0.35; plane RMS=23.20% -> smooth 3D RMS=10.58% ($\lambda=0.03$)

SCALED LATENT PLANE: one global scale fitted
color = 15-NN posterior digit

SMOOTH 3D OUTPUT: edge stress + normal bending
color = 15-NN posterior digit

SAME SMOOTH 3D OUTPUT
color = angle-defect curvature mass (rad; boundary omitted)
